

SEVEN WEEKS, SEVEN MODULES

WEEK 1	FOUNDATIONS & SPEC-DRIVEN DELIVERY Reproducible environments, git and code review, the engineering bar for the AI layer, and the AI pair-programming loop.	FOUNDATION LAYER
WEEK 2	APIS, SERVICES & THE LLM IN ANGER REST APIs, idempotency and retries, the first robust LLM call, and context engineering.	FOUNDATION LAYER
WEEK 3	CONTEXT ENGINEERING & FIRST RAG Embeddings, the scaffolded RAG pipeline, grounding and refusal, structured output and rapid UI.	APPLICATION LAYER
WEEK 4	RETRIEVAL QUALITY & EVALS RAG failure modes, chunking strategy, hybrid retrieval, reranking, and evals as a first-class discipline.	APPLICATION LAYER
WEEK 5	AGENTS, ORCHESTRATION & GUARDRAILS Agentic patterns and routing, multi-agent orchestration, retrieval as a tool, MCP, and injection defence.	APPLICATION LAYER
WEEK 6	PRODUCTION HARDENING & PLATFORM Deploy and version, cost and latency at p50/p99, monitoring and drift, prompts as code, and platformising.	PRODUCTION LAYER
WEEK 7	CLIENT DELIVERY SPRINT & DEFENCE Deepened discovery and scoping, walking-skeleton delivery, absorbing change, the reuse artefact, and defence.	DELIVERY / PROJECT LAYER
